

How to select FITOK Air Headers

With modular design, an individual air header can be made up by several standard modules as shown above. FITOK air headers are available for sale as a complete set, or customers can order **4-outlet or 6-outlet standard modules** separately. This not only makes in-line upgrade and maintenance possible, but also save time and cost significantly. Every air header is **leak tested at factory with air or Nitrogen at rated working pressure.**

Key information for air header selection:

• **Process conditions:**

- Connection size and type?
- Is a valve required at inlet?

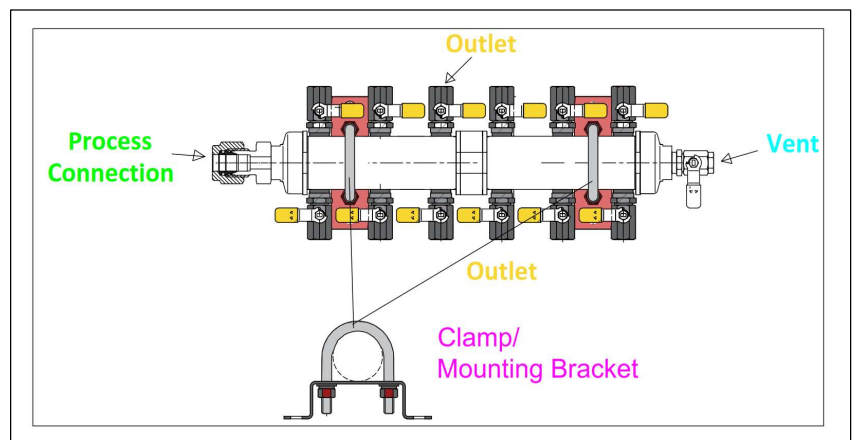

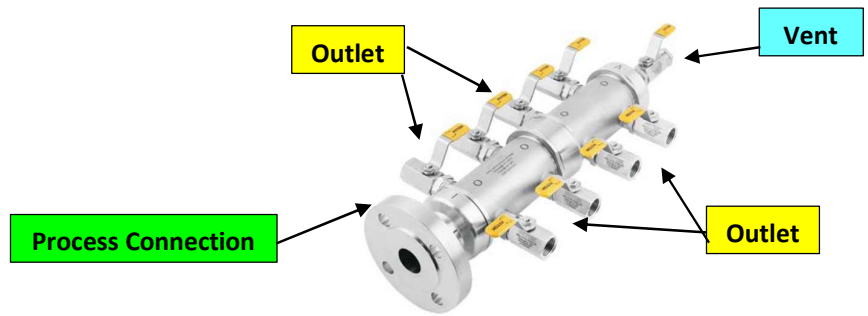

• **Outlet:**

- Quantity ?
- Is a valve required at outlet ?
- Or valve with plug ?

• **Vent:**

- Is a vent port required?
- is a valve or plug required?

• **Is mounting bracket required?**

Regulatory Compliance

- Pressure Equipment Direct (PED) 2014/68/EU

- Atmospheres Explorative Directive (ATEX) 2014/34/EU
- Restriction of Hazardous Substances Directive (RoHS) 2011/65/EU
